About Me

I'm a full-stack developer who likes to solve problems by breaking them down and figuring out what actually matters. I enjoy building clean, practical systems—whether that's frontend interfaces that feel natural or backend logic that just works without drama. I learn fast, stay curious, and prefer working on projects where the goal is clear and the team communicates openly. When I'm not coding, I usually dive into new ideas, explore technologies I haven't tried yet, or rethink how something could be built better.

Skills

- Back-end Development
- Front-end Development
- Digital Marketing
- Negotiation
- Critical Thinking
- Leadership

Education

Diploma in Computer Engineering

2022 - 2025

Tribhuwvan Secondary School, Kohalpur

I'm pursuing a Diploma in Computer Engineering where I work across core technical subjects—from programming and database systems to hardware fundamentals. The coursework blends theory with practical projects, helping me build real problem-solving habits. Each semester adds new tools and perspectives, strengthening the foundation I use in both frontend and backend development.

SEE

2022

Tribhuwan Secondary School

I completed my SEE with a strong focus on logical subjects, taking Optional Mathematics and Computer Science as my additional courses. These subjects gave me early exposure to problem-solving, coding basics, and structured thinking. That background shaped the way I approach technical work today, pushing me to understand concepts deeply and think ahead.

Experience

Front End Developer

2023-2025

Venusion Infotech PVT. LTD

work on creating fast, responsive interfaces that adapt smoothly across devices. With over 2 years of frontend experience and more than 20 completed projects, I focus on clean layouts, reusable components, and interactions that feel effortless to users. My goal is simple: build interfaces that load quickly, look sharp, and stay reliable under real-world use. Using the correct SEO rules, traffic and search increased by 80%

UI/UX Designer

2023-2025

Venusion Infotech PVT. LTD

I design interfaces that balance clarity, intention, and visual ease. My focus is on shaping user journeys that feel natural, backed by research and data from real interactions. From wireframes to polished visuals, I refine each step to reduce friction and guide users smoothly. Every screen, layout, and transition is built to serve a purpose.

Backend Developer

2023-2025

Venusion Infotech PVT. LTD.

I build backend systems that stay stable under load and easy to extend as requirements grow. My work centers on clean architecture, clear data flow, and APIs that make integration straightforward. Whether handling logic, storage, or performance tuning, I aim for predictable behavior and minimal complexity. The goal is simple: systems that work reliably.
